Community coin guide

Updated 16 November 2026 · Aapokalypto

These community coins are linked to Web3 country and city names. They are not official currencies, government projects or investments. No price, return or future value is promised.

Planned eligibility

A wallet holding an eligible second-level name under an extension listed below may qualify. Plain and flag editions are separate names. One lifetime claim per name: selling a name does not reset its claim. Final eligibility and the token awarded will be checked by the future claim service.

Coins per name

Count Unicode code points in the label before the extension, excluding the flag: up to 4 = 100 coins; 5 to 10 = 50; 11 or more = 10. Visible letters and Unicode code points can differ.

Network and safety

Each listed token has a total supply of 10 billion on Base. Existing reserve vaults do not mean the public claim is open. The claimer pays Base gas; several batches or confirmations may be needed. Never share a recovery phrase or private key. These Web3 names are not traditional DNS domains.
