# Community coin guide

Updated 16 November 2026 · Aapokalypto

These community coins are linked to Web3 country and city names. They are not official currencies, government projects or investments. No price, return or future value is promised.

## Planned eligibility

A wallet holding an eligible second-level name under an extension listed below may qualify. Plain and flag editions are separate names. One lifetime claim per name: selling a name does not reset its claim. Final eligibility and the token awarded will be checked by the future claim service.

## Coins per name

Count Unicode code points in the label before the extension, excluding the flag: up to 4 = 100 coins; 5 to 10 = 50; 11 or more = 10. Visible letters and Unicode code points can differ.

## Network and safety

Each listed token has a total supply of 10 billion on Base. Existing reserve vaults do not mean the public claim is open. The claimer pays Base gas; several batches or confirmations may be needed. Never share a recovery phrase or private key. These Web3 names are not traditional DNS domains.
